

Per the committee member majority response, an intended, final 30-day public review period for the addition of subclause 2.3.1.1 to BSR A300 Part 1 Pruning Draft 4 Version 1 has been established. The public review period will start November 9th and end on December 9th. The actual revision document, containing the one subclause, will be posted to [www.tcia.org](http://www.tcia.org) on the A300 page.

If you haven't already sent out the full draft to your constituents for review, you may do so now, but please keep in mind that the 30-day review period has been applied for the one highlighted sentence only (subclause 2.3.1.1). The full draft was posted to [www.treecareforum.org](http://www.treecareforum.org) after the meeting and is still there.

You need to be clear with your constituents that this is not a public review period for the whole document. They should only send me comments on the proposed highlighted sentence change. They should be advising you as to whether the document is an acceptable specification writing tool and standard warranting approval in the upcoming letter ballot.

After the public review period there will be a letter ballot for committee approval of BSR A300 Part 1 Pruning Draft 4 Version 1 and for submission to ANSI. The letter ballot will be established on December 10th. The letter ballot period will last until all ballots are submitted or for 6-weeks. If I receive any public comments on the addition of the one subclause (the scope of the public review period) there will also be a re-circulation letter of those comments. The letter ballot and any recirculation letters will be held simultaneously.

Any negative votes in the letter ballot will result in a recirculation letter as well.

Please note Definitions and the Annex are not part of the standard and may be further updated as required.
