

Read below for some exciting news regarding EPA registration of three new products.

DuPont Announcement

We're excited to announce that all vegetation managers have some new tools to add to their tool box! DuPont has received EPA registration of three new products that include Streamline, Viewpoint and Perspective. We also anticipate the registration of Plainview in the coming weeks. Each of these products have a new active ingredient (iminocyclopyrachlor) that is also blended with other active ingredients you have used in the past. We have seen the research and the test plots and we are very impressed. The products have a great fit for both low and high volume applications on brush. We will be able to use the products in fence rows, maintenance of wildlife openings, industrial noncropland areas including railroads, utility, pipeline rights-of-way, utility plant sites, petroleum tank farms, pumping installations, storage areas, building perimeters, roads, transmission lines, and industrial bare ground areas. The new active ingredient (iminocyclopyrachlor) is selective to grass and has very low use rates. The products are in a dry formulation and can be custom blended with other products.

Please contact myself at (540) 798-6880 or the CWC office at (800) 380-9903 and they will direct you to someone in your area that will help you determine how to incorporate these new tools into your vegetation management program.

Thanks,
Jason Myers
